We're Partners!

At Flash-Soft our relationship with our customers goes far beyond the initial sale. We are here for each of you and continually strive to improve that relationship. One of the best ways we can do that is through our website. If you have not had a chance to take advantage of the mountain of information available to you on our website, now might be a great time to visit us. From video tutorials to our gallery of what other FlashPoints customers have accomplished, we strive to keep you informed and ahead of your competition.

Stay Up-to-date

Updating FlashPoints

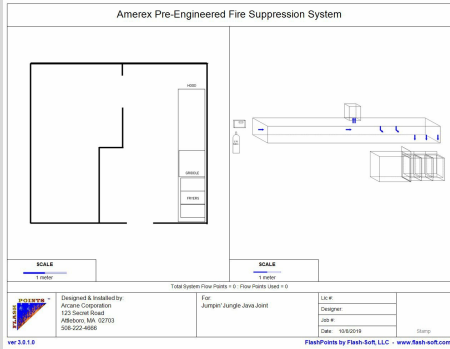

Usually FlashPoints will find a new update without any help. But occasionally, FlashPoints is not able to update itself. When this happens, use these steps to keep up-to-date:

- Look in the HELP menu at the top of FlashPoints and click the UPDATE FLASHPOINTS link to force FlashPoints to look for an update.

or

- Visit the Flash-Soft website and install the FREE DEMO of FlashPoints. The DEMO version is always the latest version of FlashPoints and will automatically UNINSTALL and REINSTALL the latest version of FlashPoints on your computer.

A major change is coming to FlashPoints

Enhanced Printing

We have completely rewritten how FlashPoints prints drawings. These changes will be coming in the next update (version 3.1.0.0 - currently being tested). The redevelopment of the printing module has allowed us to add new features! Drawings will now be able to be printed in landscape or portrait and up to 3 jobs can be included on a single drawing. This will be good news for customers who are required to submit a drawing AND a floor plan for each job. Putting both drawings on one page will reduce the cost of printing to 1 credit, instead of the 2 credits they are spending now.

The 3 job layout will be useful for showing left, right, and end views of island hoods. Or it can be used to show 2 drawings and a job that contains table information stored in a note.

Once again, FlashPoints is only limited by YOUR imagination.

Did You Know?

Starting FlashPoints

Each time FlashPoints starts the FlashPoints "splash" screen is displayed. To most people this is just a logo being displayed, but to FlashPoints it is much more.

Each time the FlashPoints Splash Screen is displayed, FlashPoints does the following steps:

- Checks to see if this is a Demo or a licensed user
- Checks to see if the seat is active
- Checks license expiration
- Sends a backup of your jobs to FlashPoints
- Downloads and Updates Customer information
- Downloads and Updates FlashPoints prices
- Downloads and Updates Currency conversion rates
- Loads customer preferences
- Checks for an update to FlashPoints

All of this is done in a matter of seconds!

So the next time you see the FlashPoints logo appear, you can rest assured that FlashPoints is doing everything it can to make your FlashPoints experience as convenient as possible. And it does it FAST!

That's CAD, Your Way!
